Think you never needed DIA? Think again.

Here's all you need to know on the solution you've been overlooking

vodacom business

South African businesses have access to **more internet choices than ever before** — and each has its place.

But knowing when your business needs a better connection — and what type — isn't always easy. That's why we've put together this eBook to help you understand the benefits of DIA (Dedicated Internet Access) and when it may be time to look into it.

Why consider DIA

Dedicated Internet Access (DIA) is a business enabler. It's built for companies that need more than basic connectivity, offering high-level consistency, reliability, and the performance to match growing demands.

With DIA you get:

A guaranteed, uncontended connection
(1:1 ratio — always yours)

Faster uploads and downloads, meaning better productivity

Low latency for smoother video calls, VoIP, and cloud performance

Symmetrical speeds, so you can upload just as fast as you download

Consistency means no surprises, no slowdowns, no excuses

Tailored service: get bandwidth that scales with your business

Enhanced security, like private connection, built-in DDoS protection, and safer data flows

Hybrid work support for seamless access for remote and in-office teams

Quick setup, so you can transition in as little as 48 hours with minimal disruption

And while **DIA** costs more than the majority of connections, **the ROI from improved productivity and reliability pays off.**

Why should you upgrade?

Dedicated Internet Access (DIA) becomes essential when the cost of downtime outweighs the cost of a premium connection. It's not about convenience — it's about continuity, compliance, and competitive advantage.

Here are examples of when DIA is mission-critical:

Stockbroking and Financial Trading Firms

Traders need uninterrupted, low-latency access to global exchanges. A momentary drop in connectivity can mean missed opportunities or regulatory non-compliance.

Surveillance and Critical Monitoring Operations

If security cameras, alarm systems, or remote monitoring tools go offline — even briefly — you risk blind spots, data loss, and compromised safety. In sectors like mining, logistics, or infrastructure, constant visibility is non-negotiable.

Call Centres and Customer Service Hubs

VoIP calls rely on consistent bandwidth. Dropped calls or jittery voice quality damages customer trust, slashes efficiency, and can lead to lost revenue during peak times.

Healthcare Providers and Telemedicine Networks

In clinical settings, every second counts. Unreliable internet can delay diagnoses, interrupt consultations, and disrupt access to critical health data.

vodacom business

Teams Handling Large Digital Workloads

Architecture, engineering, media production, and cloud software development all rely on fast, symmetrical upload and download speeds. Stalling during uploads or file syncs delays timelines, disrupts collaboration, and drains team productivity.

Regulated Industries and Compliance-Driven Sectors

In finance, legal, or government operations, service disruptions can breach SLAs or compliance rules — triggering penalties and reputational damage.

Bundling DIA with other services

DIA works seamlessly with a broader suite of business tools — like SD-WAN, VoIP, and cloud hosting. That means one vendor, one contract, and one integrated stack that's tailored to your operational needs. You get:

Unified connectivity and communication

Enhanced security and visibility

Simplified support and billing

Why choose Vodacom Business?

With us, you get more than just a line. **You get:**

National coverage with multiple last-mile partnerships

24/7 support with local experts

End-to-end SLAs and performance guarantees

Scalable bandwidth — from SMEs to large enterprises

Proactive monitoring and fast issue resolution

Exclusive access to our 5G-ready fibre infrastructure

Industry-leading installation and fault resolution times

Don't let slow or unreliable internet hold your business back. Whether you're scaling operations, enabling remote work, or simply need a connection you can count on — **Vodacom Business has you covered.**

Request a call to get a **free tech roadmap** and find the internet solution for your business.
